

Medical Drug List

Effective Jan. 1, 2023

Most benefit plans include medical drug management and prior authorization requirements. Check your plan materials to see if this information applies to you. This list may change or expand from time to time without prior notice.

Drugs on this list may require prior authorization under the **medical benefit** through our Specialty Medical Benefit Management (SMBM) program.

To start the prior authorization process, providers should sign in to the health plan's provider website to access the online medical prior authorization system. Providers can also request prior authorization by calling 877-440-0089 or faxing requests to 612-367-0742. A prior authorization does **not** guarantee eligibility or payment of a claim. Provider specialty is considered when reviewing all medical and self-administered drug prior authorization requests.

Drugs noted with a hashtag (#) are preferred. Drugs noted with a carat (^) **do not** require prior authorization.

Drugs noted with an ampersand (&) are **excluded** but may be covered with prior authorization. If these drugs are approved for coverage, management programs may apply.

Drugs noted with an asterisk (*) require prior authorization **and** may only be authorized to be administered in certain locations (sites of care), such as an infusion center or the patient's home. Note that the site-of-care requirement does **not** apply if the drug is being used for cancer treatment.

For members who have a medical prior authorization requirement, these drugs always require prior authorization if billed under the medical benefit unless otherwise noted.
